PROFESSIONAL SUMMARY

Computer Science student passionate about solving complex problems through AI and data science. Experience spans healthcare IT systems, machine learning pipelines, and large-scale data analysis. Projects include NASA Mars mission analysis, explainable AI health recommendations, and adaptive learning platforms. Seeking internships in AI Engineering, Machine Learning, Data Science, and Software Development.

EDUCATION

Florida Atlantic University **Expected 2027**
Bachelor of Arts in Computer Science
Minor: Artificial Intelligence and Data Science | GPA: 3.7| Top 50 Student in Computer Science Department
Relevant Coursework: Artificial Intelligence, Deep Learning, Data Science, Python Programming, Mobile App Development

WORK EXPERIENCE

Nursing IT Support Specialist
Florida Atlantic University, Boca Raton, FL September 2025 - Present

- Manage healthcare information systems and EHR databases supporting 200+ nursing students and faculty
- Troubleshoot medical equipment, software, and computer workstations in clinical simulation labs
- Maintain HIPAA compliance and data security protocols for patient simulation and educational records
- Create technical documentation and user guides for healthcare-specific applications

Sales Associate
Dick's Sporting Goods, Boca Raton, FL 2024 - Present

- Collaborate with team of 15+ associates to achieve monthly sales targets through effective communication
- Process 50+ daily transactions with 100% accuracy in point-of-sale operations and inventory management
- Deliver customer service and problem-solving in fast-paced retail environment

RELEVANT PROJECTS

NASA L'SPACE Mission Concept Academy - Mars Water Resource Analysis *May 2025 - September 2025*

- Selected from 952 U.S. colleges and universities to complete competitive Mission Concept Academy program
- Analyzed 100GB+ planetary datasets using JMARS and SHERLOC to identify Mars landing sites with water resources for future robotic exploration missions
- Conducted mission assurance and risk analysis using aerospace systems engineering methodologies for simulated $400M Mars exploration project
- Authored 350+ pages of technical documentation (SRR, MDR, PDR) in collaboration with NASA JPL mentors

Health Data Recommendation System - Vitamin Personalizer *March 2025*

- Built explainable AI recommendation engine analyzing 50+ blood test parameters to provide personalized vitamin guidance with 87% prediction accuracy

- Designed transparent model reasoning using SHAP values to help clinicians and patients understand health recommendations
- Collaborated with team of 3 to deliver production-ready solution with comprehensive technical documentation (SDD, SRS, Test Plans)

Machine Learning and Deep Learning Projects *January 2025 - March 2025*

- Built MNIST binary classifier achieving 93% accuracy using feature engineering, hyperparameter tuning, and complete ML pipeline
- Trained 3 CNN architectures (ResNet-18, VGG-16, custom) on CIFAR-10 dataset achieving 80%+ test accuracy on 50,000 images
- Reduced overfitting by 15% through batch normalization, dropout, and data augmentation techniques

iOS Development - BeReal Clone (Social Media App) *2024*

- Built full-featured social media iOS application using Swift and Xcode with real-time photo sharing functionality
- Implemented user authentication, camera integration, and social feed features following iOS design patterns and MVC architecture
- Designed and developed RESTful API integration with Back4App for secure user data management and content delivery

Data Analysis Projects

- Flight Delay Analysis: Analyzed 2-year airport delay patterns using R and SQL, improving prediction accuracy by 30%
- Movie Trends Analysis: Conducted 10-year analysis identifying 5 key success patterns in award-winning categories using Matplotlib and ggplot2

TECHNICAL SKILLS

Programming: Python, R, SQL, JavaScript, Swift, HTML/CSS, VHDL
ML & AI: TensorFlow, Keras, PyTorch, scikit-learn, LangChain, HuggingFace, OpenAI API, Explainable AI
Data Science: Pandas, NumPy, Matplotlib, ggplot2, Statistical Analysis, Data Visualization
Tools & Platforms: Git/GitHub, AWS, Docker, REST APIs, PostgreSQL, SQLite, Linux
Specialized: Healthcare IT Systems, EHR, HIPAA Compliance, Siemens NX

CERTIFICATIONS

NASA L'SPACE Mission Concept Academy Graduate *May 2025 - September 2025*

- Selected from 952 U.S. colleges and universities for competitive national aerospace program
- Acquired competencies in Project Management, Systems Engineering, Risk Management, Heat Transfer, and Siemens NX
- Completed Systems Requirements Review, Mission Definition Review, and Preliminary Design Review for Mars mission

NSF-Funded Technical Bootcamps *2024 - 2025*

- Completed intensive bootcamps in: Generative AI, Cybersecurity, Cloud Computing, Practical Programming
- Built and secured LLMs, developed AI agents using OpenAI, HuggingFace, LangChain, and prompt engineering techniques
- Mastered responsible AI use for problem-solving, data analysis, and research methodology
- Skills: Network Security, Data Security, Encryption, Containerization, Blockchain, Secure Coding Practices
